| Summary   | <p>I am an undergraduate currently pursuing a BSc (Hons) in Information Technology (Specializing in IT) at SLIIT. I am actively seeking internship opportunities in the IT field, particularly in areas such as web development, UI/UX design, UI/UX engineering, programming, or database management. Through such experience, I hope to enhance my knowledge and progress towards becoming a capable and professional individual in the IT field.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                     |

| Projects  | <div><b>Online Laundry Management System</b><p>Developed a modular web-based system using Java and the MVC architecture to streamline laundry service operations. Implemented full CRUD functionalities, with backend logic handled through Servlets and JDBC. Initially managed the database using phpMyAdmin before migrating to MySQL for improved performance and reliability. Applied OOP principles to ensure the system remained scalable, maintainable, and easy to extend with additional service modules.</p><p><b>Technologies:</b> Java, Servlets, JDBC, MySQL, HTML, CSS, JavaScript</p></div> <div><b>Red Brick – Construction Management System</b><p>This system was developed using the MERN stack (MongoDB, Express.js, React.js, and Node.js) to streamline and automate key operations within the construction industry. The platform efficiently manages users, projects, materials, budgeting, scheduling, and workforce-related tasks. It includes six core modules: User and Employee Management, Project and Task Management, Inventory and Material Handling, Budget and Expense Tracking, Machinery and Asset Management, and Project Timeline &amp; Scheduling. The frontend is developed using React.js and styled with Tailwind CSS, ensuring a responsive, intuitive, and modern user interface suitable for construction workflows. The backend, built with Node.js and Express.js, provides secure and scalable RESTful APIs for handling data across all modules. Data storage and management are handled using MongoDB, with Mongoose used for structured modelling. The system follows a modular and scalable architecture to support future expansion and seamless maintenance. Additional features include chatbot assistance and voice navigation to support quick access to project data, enhance user interaction, and improve overall accessibility—especially useful for on-site personnel working in fast-paced environments.</p></div> |                     |

**Technologies:** React.js, Tailwind CSS, Node.js, Express.js, MongoDB, Mongoose, JavaScript, Chatbot Integration, MVC

**My Piggy Bank – Finance Tracker Mobile App**

My Piggy Bank is a user-friendly mobile application designed to help individuals manage and monitor their daily income and expenses with ease. Developed entirely using Kotlin in Android Studio, the app features a clean and intuitive interface that gives users a clear snapshot of their financial habits. Users can effortlessly add, update, and track their transactions, making budgeting and expense management simple and effective.

From a technical standpoint, My Piggy Bank was initially built using Shared Preferences for lightweight local storage, and later upgraded to SQLite for more reliable and structured data management. To further optimise performance and streamline database operations, the application integrates Room ORM, providing a robust abstraction layer over SQLite. The app follows the MVVM architecture, ensuring clean code separation, scalability, and a smooth development workflow.

**Technologies:** Kotlin, XML, Shared Preferences, SQLite, Room ORM, MVVM Architecture
